ABOUT US

East-Coast Sustainable Pvt. Ltd (East Coast) was founded by highly qualified and experienced professionals, who have a deep understanding of energy issues, renewable energy, environment conservation and climate change. The East Coast team has experience of conducting more than 700 projects in these areas for various sectors of the economy.

The vision and mission of the company are:

> *The company's vision is "To be the preferred choice of clients seeking advisory and solutions in the areas of energy, environment, safety and risk towards sustainability and competitiveness of their businesses"*
>
> *The company's intends to realize its vision by "Design and delivery of client centric services and solutions, by leveraging upon the experience and expertise of the company with a value proposition that exceeds client's expectations and needs"*

The company clientele includes industries, government authorities, financial institutions, nodal agencies, regulatory bodies, academic institutions, commercial buildings and NGO's.

OUR SERVICES AND SOLUTIONS

Energy Efficiency

Energy Efficiency is a thrust area of East Coast, it promotes awareness among the core sectors like industry, commercial/buildings, municipal sectors, and agriculture about the significance of energy conservation and extends technical assistance in their endeavors to optimize and judicial use of energy. In this regard, the specific services of East Coast to its clients range from energy audits and conservation studies for industrial, agriculture, municipal, and commercial buildings sectors; conducting training capacity building programs for various stakeholders; technical assistance for implementation of energy saving projects, energy policy and research studies; energy benchmarking studies; feasibility studies; preparation of detailed project reports; developing waste minimization & cleaner production solutions for MSME sector; and technical assistance for implementation of cleaner production solutions.

East Coast uses diverse business models, evolving from comfort level of clients. In contrast to traditional practice, the business array has been designed where energy audit is the starting point towards fulfillment of the energy performance goal.

East Coast team also has extensive experience of carrying out Investment Grade Energy Audit study, which can be used as a basis for developing project baselines for execution of ESCO projects.

Development of International Standards Organization (ISO) Management Systems

East Coast team has experience in developing comprehensive management system as per the ISO9001:2015 Quality Management System, the ISO14001:2015 Environment Management System, ISO45001:2018 Occupational Health and Safety Management Systems and ISO50001 Energy Management System. The team expertise includes conduct of awareness programs and internal auditor training.

Sustainability Reporting

East Coast team can undertake Sustainability Reporting as per the applicable Global Reporting Institute (GRI) standards to enable organization's vision of communicating comprehensive sustainability report which documents the impact of their business's activities on economic, environmental and social factors.

Sustainability Reporting enables world class organizations to demonstrate their underlying commitment to a sustainable global economy and East Coast team can hand-hold organizations in their sustainability journey and achieve business excellence.

Perform Achieve and Trade (PAT) Scheme

East Coast is an Empaneled Accredited Auditing Firm (EmAEA) by BEE for conducting Monitoring and Verification Audits and Check Verification audits under PAT scheme in five sectors (Cement, Iron & Steel, Thermal Power Plant, Refinery and Distribution). The team has experience of rendering PAT services for more than 100 designated consumers under EC Act. East Coast will prepare verification report as per PAT Rules which inter-alia will contain AEA opinion on entitlement or requirement of energy saving certificates for the plant as DC.

Renewable Energy

East Coast team has rendered significant services in renewable energy sector and can extend services ranging from biomass resource assessment studies, feasibility studies, detailed project reports, and detailed engineering services for biomass power projects. East Coast team has carried out feasibility assessment of grid-integrated utility solar photo-voltaic powerplants, developed specifications, engineering documentation along-with vendor short listing.

East Coast has helped several commercial and industrial consumers to procure solar energy through open access at a competitive and discounted tariffs through competitive bidding that has helped its clients to not only meet their corporate sustainability goals but also reduced energy costs with zero investment. The team has proven capability to handle bid management for selection of vendors both in Opex and Capex models for the capacities up to 1,500 MW.

Safety Audits

East Coast team has carried out safety audits (General, Fire & Electrical) to comply with mandatory and/or voluntary safety standards, with the objectives of securing safety of the work-place-personnel, buildings and industries by assessment of adequacy of processes, management commitment and equipment's. The safety audit are performed as per India Standards 14489:1998 Code of Practice on Occupational Safety & Health Audit, Factories Act:1948, ISO 45001:2018 Health and Safety Management Standard, Oil Industry Safety Directorate Standards, Environmental Protection Act and Rules, The Mines Act: 1952, Explosive Rules: 2008, Central Electricity Authority Regulations (Relating to Safety and Electricity Supply): 2010 etc.

Environmental Management

East Coat team has capability to undertake environmental management services such as Environmental Impact Assessment, Carbon Foot-printing, Effluent Treatment Plant & Sewage Treatment Plant design solutions, Municipal Solid Waste solutions. The team has also conducted acoustic studies which involved measurement of the sound levels at specified battery limits within an industrial facility and/or facilities around airports. The team has expertise to perform outdoor and indoor air monitoring services to provide a baseline and /or identify the air quality improvement measures.

Project Management

East Coast provides project management services for energy efficiency, renewable energy and environment conservation projects and act as Lender's and/or Owners Engineer, to oversee that the three crucial elements of the project i.e. scope, time and cost are in accordance to the agreed contractual terms. Review of the key project management plans including their schedules such as quality management plan, project resources plan (manpower & equipment's), SHE plans and cost management plan to ensure that lender and/or owner is duly informed on the project progress. Review of the project risk register, to ensure that risks are listed and assigned to the party who is (or are) best capable of handling them. Provide payment certifications as per the agreed contract and submit to the lender and/or owner monthly project reports, which could form the basis for lender and/or owner review and assessment.

East Coast team's expertise and experience in all the phases of the projects life cycle i.e. initiation to commissioning, would strengthen the lender and/or owner's resolve to achieve the project deliverables in sustainable and competitive manner.

East Coast team can support the financial institutions in development of pre-feasibility assessment, feasibility assessment and detailed project report preparation in the areas of energy, renewable energy and environment conservation. The East Coast team can support in the monitoring and evaluation studies for the financial institutions and clients.

Demand Side Management (DSM)

East Coast team has undertaken demand side management studies in agricultural, municipal and industrial sectors, to rationalize electrical demand through advanced technologies and best practices which enhance consumption side efficiencies.

Water Audit & Water Balance

Water is a precious commodity which requires special attention and in most organizations the usage of water is not a focus area up until now. However, we at East Coast based on our experience we have seen that progressive organizations have started recognizing the importance of water conservation and are appreciating the need to treat water as an economic resource. East Coast offers a comprehensive water audit in which we develop a comprehensive water balance diagram based on measurement of water consumption in the different systems/equipment's, identify key performance indices viz. specific water consumption (m^3/kWh), and identify areas of water conservation and optimization with cost-benefit analysis.

Energy Planning

East Coast team can assist institutions/industries in developing integrated energy plans to meet objectives of achieving renewable targets and/or complying with industry specific targets of climate change initiatives of United Nations Framework Convention on Climate Change.

OUR SOLUTIONS

East Coast team can support industries and institutions to develop customized solutions to enhance their energy productivity and/or implementation of government schemes and/or implementation on site renewable energy projects. The solutions are researched to ensure that all the factors are objectively assessed for operability, maintainability, innovations and technological advancements.

Few of the solutions that are being offered by East Coast, are as described below:

- Power factor correction: Capacitors and automatic power factor controllers for power factor correction and improvement to comply with state electricity board regulations and benefit from high power factor maintenance rebates;
- Demand Controllers: Maximum demand controllers to reduce demand for avoidance of maximum demand penalties by optimizing the electrical load and keep the demand within approved limits;
- Harmonic Filters: Passive or Active Harmonic Filters for reduction of voltage and current harmonics to reduce the noise in electrical system as well as increase the reliability of the electrical system;
- Energy savers: Custom built energy savers for lighting system, compressed air system and air conditioning system to optimize system performance and energy

reduction;

- Energy Management solutions: cloud based or custom-built energy dash board for management overview, deployment of advanced control and monitoring systems that provide online information on key performance indices such as specific energy consumption, energy consumption and energy savings;
- Project Implementation: implementation of energy efficiency systems like agricultural pump sets, energy efficient appliances – Light Emitting Diodes (LED), window air conditioners, star rated direct current fans;
- On-Site Renewable Energy: implementation of building integrated renewable projects for leveraging the benefits and incentives provided by the state utilities and/or meet corporate renewable energy targets.

OUR CLIENTS

The company's services and solutions are targeted towards the following market segments:

- Industries:
  - Aluminum Industries;
  - Refineries;
  - Chemicals & Fertilizer Industries;
  - Engineering Industries;
  - Iron & Steel Industries;
  - Cement Industries;
  - Pharmaceuticals;
  - Pulp & Paper Industries;
  - Textile Industries etc.
- Power plants:
  - Thermal power plant (coal);
  - Gas based power plant (combined cycle and simple cycle);
  - Captive power plant (in industries).
- Municipalities / Corporations:
  - Domestic Water Pumping system;
  - Street Lighting system;
  - Waste water collection & treatment system;
  - Solid waste management system etc.
- Buildings:
  - Commercial Complexes / Malls;
  - Hospitals;
  - Education Institutes;
  - Corporate Offices etc.

- Governments / Inter-governmental Institutions:
  - Government Ministries (Ministry of Electricity / Power, Ministry of Water / Agriculture, Ministry of Renewable Energy Resources etc.);
  - Inter-governmental Institutions (United Nations Environment Program, World Bank, International Renewable Energy Development Authority, United Nations Development Program);

OUR INSTRUMENTS

The company has state-of-the-art instruments like:

- Power Analyzers;
- Digital Harmonic Analyzer;
- Infrared Thermometers;
- Digital Pressure Indicators;
- Hygrometers;
- Thermography Infrared Image Sensor;
- Flue gas analyzers;
- Temperature sensors and
- Noise Meter etc.
- Ultrasonic Flow Meter;
- Digital Clamp Meters;
- Anemometers;
- Lux Meters;

These instruments are extensively used for recording & measurement of electrical & thermal parameters of process systems, which form the basis for analysis of performance vis-a-vis design, investigate causes of design variances, develop opportunities for achieving rated performance and assess feasibility of energy efficient alternatives.

The instruments are capable of recording process parameters as may be required in performing an Investment Grade Energy Audit Study.

These instruments can be also used for measurement and recording of the environmental parameters.

REPRESENTATIVE LIST OF CLIENTS

East Coast has executed advisory projects for prestigious clients including industries, institutions and MNC's, a representative list of it is presented below.

East-Coast Sustainable Private Limited,
Regd. Office: 6-80/1, Priya Gardens,P.O
Simhachalam, Visakhapatnam-530028.
Andhra Pradesh, INDIA.
CIN: U74999AP2018PTC108807.
Contact No: +91 97053 00059 (Srinivas) and +91 99897 01735 (Ramprasad)
